Finger Guard  
IP2X Type

Slit Metal Plate  
IP4X Type

Dust and Water  
Resistant  
IP43 • IP55 Type

View Expanded Product Information, Specifications, CAD, Accessories & more online. Visit [www.orientalmotor.com/catalog](http://www.orientalmotor.com/catalog) or use the QR code and select "Enclosure Fan Modules".

These enclosure fan modules combine an axial flow fan with peripheral equipment, such as finger guard, filter media, frame and mounting hardware.

## What is an Enclosure Fan?

An Enclosure Fan is a combination package consisting of an axial flow fan and peripheral equipment (cover, filter media, frame and finger guard). It is suitable for cooling a control box or other enclosure.

● For finger guard IP2X type with filter, the product is delivered fully assembled.

## Lineup

Module (Color) List Price	Module Dimensions W×H [mm (in.)]					
	129×134 (5.08×5.28)	157×170 (6.18×6.69)	161×158 (6.34×6.22)	180×180 (7.09×7.09)	209×226 (8.23×8.90)	284×284 (11.2×11.2)
Finger Guard IP2X Type (Light Gray) \$50.00~			 AC DC □119 mm (4.69 in.) Fan Max. Air Flow: 2.7 m <sup>3</sup> /min (95.3 CFM)			
Slit Metal Plate IP4X Type (Light Beige) \$94.00~				 AC DC □119 mm (4.69 in.) Fan Max. Air Flow: 1.1 m <sup>3</sup> /min (38.8 CFM)		 AC □180 mm (7.09 in.) Fan Max. Air Flow: 8.3 m <sup>3</sup> /min (293 CFM)
Dust and Water Resistant IP43 Type IP55 Type (Light Gray) \$84.00~	 AC □92 mm (3.62 in.) Fan Max. Air Flow: 0.49 m <sup>3</sup> /min (17.3 CFM)	 AC DC □119 mm (4.69 in.) Fan Max. Air Flow: 0.83 m <sup>3</sup> /min (29.3 CFM)			 AC DC □119 mm (4.69 in.) Fan Max. Air Flow: 1.5 m <sup>3</sup> /min (53.0 CFM)	

● For finger guard modules, enclosure fan modules that are equipped with filters and those that are not equipped with filters are available. Slit metal plate modules and dust and water resistant modules are equipped with filters.  
 ● All modules are available in 2 types of air flow direction: suction type and exhaust type.  
 ● Maximum air flow values are examples.

## Differentiating Features

Finger Guard  
IP2X Type

Can offer protection against finger contact.

Slit Metal Plate  
IP4X Type

The equipment is protected against ingress of wires [with a diameter of 1 mm (0.04 in.) or more]

Dust and Water Resistant  
IP43 Type

The equipment is protected against ingress of wires [with a diameter of 1 mm (0.04 in.) or more] and sprayed water (coming from directions within a range of 60° relative to the vertical plane)

Dust and Water Resistant  
IP55 Type

The equipment is protected against the ingress of dust and water jets (from all directions)

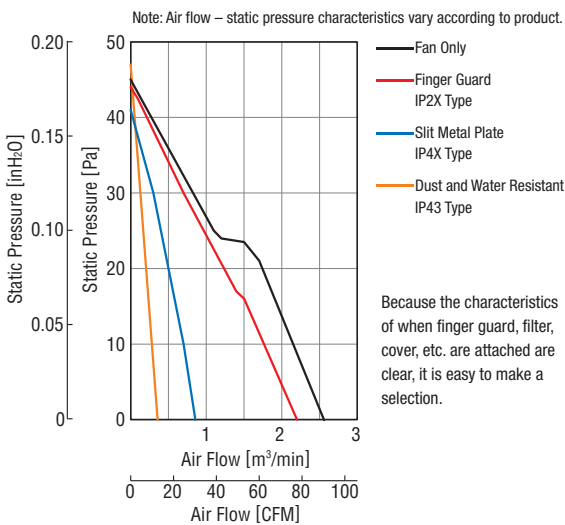

For information about degree of protection → Page I-8

## Features

### Integrated Structure

Because the enclosure fan modules have an integrated structure, their characteristics are clear, and they are easy to select and easy to install. Also, their integrated structure makes them easy to order.

### Clearly Defined Characteristics Make Ordering Easy

### Easy Installation

When Necessary Peripheral Equipment are Ordered Separately

Assembling multiple parts screw by screw takes time, and replacement is difficult.

Installation is Easy with the Integrated Structure of the Enclosure Fan Module

(When using finger guard IP2X type)

Speed Nut Improves Work Efficiency

By inserting the speed nut into the installation plate, the fan module can be fixed with tapping screws from the exterior of the control box.

### Installation holes are easy-to-machine square holes.

Using Axial Flow Fan Alone

[Outlet Side]

Using Enclosure Fan Module

Square Hole

### Easy Maintenance

The body cover can be easily detached from the outside. Filter media replacement is easy.

Body Filter Media Cover (When using finger guard IP2X type)

### Improvement of Equipment Reliability (Slit Metal Plate IP4X Type, Dust and Water Resistant IP43-IP55 Type)

If dust or water droplets enter the control box, the internal devices may malfunction, which can affect the entire equipment system. The slit metal plate IP4X type modules and the dust and water resistant IP43-IP55 type modules prevent the infiltration of dust and water droplets, which improves the service life and reliability of the devices contained in the enclosure.

## Application Example

Environment with Dust and Water Droplets

Air is suctioned using the fans at the bottom, and exhausted from the panel at the top. The pressure inside the enclosure is raised, so that dust does not easily enter the enclosure through gaps other than those on the suction intake side (such as through gaps at case joints and around cable holes).

Enclosure Contains Many Devices and Internal Temperature is High

Air is suctioned using the fans at the bottom, and exhausted from the fans at the top. This method is suitable for applications where components are densely installed in the enclosure and the method on the left does not provide sufficient cooling.

Environment Free of Dust and Water Droplet

The pressure inside the enclosure is lowered, so that air does not easily leak out through gaps other than the outlet side (such as through gaps at case joints and around cable holes). Appropriate for use in an environment with no dust or water droplets nearby.

## Further Reduction in Power Consumption and Noise with the Use of a Fan Thermostat

What is a Fan Thermostat?  
It is a switch that turns the contact ON when a set temperature is reached. When used with a fan, it can control the ON/OFF state of the fan.

Reduced Power Consumption!

The fan operates only when necessary

Additional Benefits!

- Minimizes noise when the fan is rotating!
- Multiple fans can be controlled simultaneously!

Fan Thermostat **AM2-XA1**

● For details, check page G-104.
